WEATHER CONDITIONS – Simonsberg, Stellenbosch
Flowering and berry set was good. Vigorous growth happened due to high soil moisture content, which was a result of the wet winter, therefore more canopy management was required. Rain in November and January meant that we needed less irrigation, but disease pressure was higher and stricter controls were needed. Ideal dry and moderate conditions reigned during ripening in late January and February. Cooler March helped with hang time on the vine. Harvest was 1 week later than normal due to late cold winter. Stellenbosch had one off the wettest seasons in years, but wine quality is exceptional.

WINEMAKING
The grapes were lightly crushed into stainless steel tanks. The fermentation was done by natural yeast with a mixture of rack and returns and open pump overs. Post fermentation skin contact for 2-3 weeks and pressed gently. Malolactic fermentation occurred in French oak barrels. Racked on average every 4 months. Matured during 12 months in oak.

GRAPE VARIETIES
Cabernet Sauvignon

PRODUCTION
11,000 cases – 66,000 bottles

ANALYSIS
Alcohol: 14,0% Vol.
pH: 3,7
Total Acidity: 5,3 g/L
Residual Sugar: 2,5 g/L
